

INSINKERATOR® EARNS AWARD FOR EXCELLENCE IN ENGINEERING AND DESIGN

InSinkEerator®, the world's largest manufacturer of food waste disposers and instant hot water dispensers, recently earned the National Society of

Professional Engineers Professional Engineers in Industry (NSPE-PEI) 2008 New Product Award. The InSinkEerator Evolution Series® was recognized for its innovative application of engineering principals and overall impact on our national economy.

The Evolution Series residential food waste disposers marked the first technology advancement in the category in more than 40 years. The line of food waste disposers was created to fit specific consumer needs, and to address consumers' two most common issues: grinding capability and noise.

MultiGrind technology features multiple grind stages to allow the disposer to grind virtually any food waste without clogging or jamming. SoundSeal technology features insulation and anti-vibration components that make the disposers up to 60 percent quieter than others on the market.

These advances in technology and design embody the spirit of the NSPE-PEI New Product Award, which recognizes the benefits derived from the research and engineering of new products and the American companies with the foresight and knowledge to bring them to market. InSinkEerator was presented with the New Product Award in the large company category at the NSPE's Annual Conference on July 26, 2008.
